

Orders → Production → Mobile — Detailed System Guide

Maher Al-Aghbar & Sons Furniture ERP

Audience: Import into another knowledge base / training / partner brief

Language: English

Scope: How commercial demand becomes a sales order, how production and floor inventory work, and how the **mobile app** presents that information to dealers, factory admins, and floor workers.

Table of contents

7. [Glossary](#)

1. System map at a glance

Canonical commercial + manufacturing pipeline:

Inquiry / RFQ

- Quotation (draft → internal approve → send)
- Dealer Accept ★ only step that creates a Sales Order
- Sales Order DRAFT
- Confirm ★ creates Production Orders + freezes workflow + reserves materials + schedules
- Floor production (stages / tasks / WIP kits / materials)
- QC → Packaging → Finished Goods
- Delivery / load → Dealer receipt confirm
- Sales Order DELIVERED (invoice ensure)

Applications (who uses what)

Application	Who	Device
Admin Web	Management, sales, purchasing, warehouse, production supervisors, QC, accounting	Desktop / tablet
Mobile — Admin	Same factory roles on the floor / away from desk	Phone / tablet
Mobile — Dealer (customer)	B2B dealers	Phone / tablet
Mobile — Employee	Floor workers, inspectors, delivery staff	Phone / tablet / shared terminals
Customer Portal	Dealers on desktop	Desktop / tablet
API	All clients	Server

This guide focuses on **order intake → production → mobile presentation**. Invoice/payment accounting and admin-web-only authoring screens are mentioned only where they touch the order chain.

Critical commercial invariant

Action	Who	Creates Sales Order?
Internal Approve quotation (AR اعتماد)	Factory staff	No — only unlocks Send
Dealer Accept quotation (AR قبول)	Owning dealer only	Yes — SO DRAFT
Admin/Sales Accept on behalf of dealer	—	Not implemented (HTTP 403)

2. Part A — How an order enters the system

2.1 Intake channels (Request for Quotation)

Demand usually starts as a **Request for Quotation (RFQ)** (`RequestForQuotation`).

Sources (`RequestSource`):

Source	Typical meaning
PORTAL	Dealer submitted from portal / mobile new-order
SALES	Sales person entered the request
WHATSAPP / EMAIL / PHONE / SITE_VISIT	Manual capture from those channels
PDF / IMAGE / HANDWRITTEN	Document-based intake (often via AI OCR)

An RFQ holds: customer (dealer), contact, project name, required delivery date, delivery address, priority, line items (product or free-text description, quantity, measurements, wood/fabric notes), and attachments.

2.2 AI / OCR intake (human-in-the-loop)

Factory can upload photos/PDFs of handwritten or printed requests. AI extracts fields into a review job. **A human must approve** before an RFQ is created. AI **never** auto-creates quotations, sales orders, or confirms production.

- Mobile admin: AI intake list + review screens
- API: `apps/api/src/modules/ai-intake/`

2.3 RFQ status machine

Status	Meaning	Who moves it
DRAFT	Saved, not submitted	Creator
SUBMITTED	Dealer/sales submitted for factory review	Submit
UNDER_REVIEW	Sales/ops reviewing	Staff
NEEDS_INFORMATION	Waiting on dealer clarification	Staff → dealer edits → resubmit
READY_FOR_QUOTATION	Specs clear; ready to price	Staff
QUOTED	At least one quotation created/sent for this RFQ	Quotation create/send
CLOSED	Commercially closed (typically after dealer Accept)	Accept / staff close
CANCELLED	Abandoned	Staff

Staff gates are HTTP actions on the requests API (under-review, needs-information, ready-for-quotation, etc.).

2.4 Quotation lifecycle

Quotations are the **commercial** document: priced lines, terms, totals, versioning.

DRAFT

- INTERNAL_REVIEW (sales submits for approval)
- APPROVED (staff approve – send gate only)
- SENT (sent to dealer; RFQ → QUOTED)
- ACCEPTED ★ dealer only – creates SO DRAFT; RFQ → CLOSED
or REJECTED / REVISION_REQUESTED (dealer; no SO)

Also in the enum (less central): VIEWED , EXPIRED , CANCELLED .

Revision: Staff can open a new DRAFT version from a rejected / revision-requested quote. Same RFQ can have multiple quote versions, but **only one ACCEPTED quote (and one SO) per RFQ**.

Visibility: Dealers only see quotes that are SENT (or later commercial outcomes). Unsent drafts are not visible to dealers (404).

2.5 Dealer Accept → Sales Order DRAFT

When the owning dealer calls Accept on a SENT quotation:

1. Quotation status → ACCEPTED (with acceptedById , optional signature).
2. System creates **Sales Order** DRAFT with:
 - New SO number (SO-YYYY-####)
 - Customer, currency, payment/delivery terms, totals copied from quote
 - Delivery address / project / external PO / required delivery date from RFQ when available
 - **Lines** copied from quotation lines (product, description, specs, qty, prices)
3. RFQ → CLOSED (when linked).
4. Same-RFQ concurrency is locked so two accepts cannot create two SOs.

2.6 Auto-confirm vs manual confirm

System setting **auto_confirm_so_on_accept** (default **true**):

- If **true**: after Accept, API immediately runs sales-order **confirm** (see Part B).
- If **false**: SO stays DRAFT until staff (or process) calls POST /sales-orders/:id/confirm .

Confirm is only allowed from DRAFT .

3. Part B — Sales order → production

3.1 What a Sales Order represents

A **Sales Order (SO)** is the factory's commitment to build and deliver what the dealer accepted. It links:

- Customer (dealer)
- Optional quotation / RFQ lineage
- Commercial lines
- One or more **Production Orders (PO)** after confirm
- Later: deliveries, invoices, returns

3.2 Sales Order statuses (operational meaning)

Status	Meaning
DRAFT	Accepted commercially; not yet released to factory planning
CONFIRMED	Enum value; live confirm often jumps past this to materials/ready

WAITING_FOR_PAYMENT	Commercial hold (used in some seeds / processes)
WAITING_FOR_MATERIALS	Confirm ran but inventory reserve was not ready
READY_FOR_PRODUCTION	Materials reserved; POs planned; schedule generated
IN_PRODUCTION	Floor work started on at least one linked PO
READY_FOR_DELIVERY	Production/packaging complete enough for outbound
DELIVERED	Dealer confirmed receipt (or equivalent rollup)
COMPLETED	Enum end-state (accounting/completion processes)
ON_HOLD	Explicit hold
CANCELLED	Cancelled (releases inventory; cancels open POs when allowed)

Holdable examples: confirmed / ready / in production / waiting materials / waiting payment.

Cancellable early statuses include draft / confirmed / ready / on hold / waiting payment / waiting materials — not deep mid-production or delivered.

3.3 Confirm side-effects (the factory release)

`SalesOrdersService.confirm` (only from `DRAFT`) does the following in one transaction, then scheduling:

1. Validate

- At least one line with `productionRequired` (default true).
- Active production stage definitions exist.

2. Create Production Orders

- **One PO per production-required line.**
- Status starts as `PLANNED`.
- Linked via `salesOrderId` + `salesOrderLineId`.
- Carries product / description / quantity / specs / required delivery date.

3. Freeze workflow snapshot

- For each PO, `createSnapshotForProductionOrder` copies the product's published workflow into a locked snapshot for that PO.
- Creates stage instances, snapshot nodes (including semi/finished tracking flags), material inputs, and **production tasks** (except pure logistics nodes such as DELIVERY, which are tracked via Delivery entities).

4. Inventory reserve

- `tryReserveForSalesOrder`.
- If **not ready**: all new POs → `WAITING_FOR_MATERIALS`; SO → `WAITING_FOR_MATERIALS`.
- If **ready**: SO → `READY_FOR_PRODUCTION` (POs stay `PLANNED` until start / readiness transitions).

5. After commit — schedule

- For each PO: `scheduling.generateForProductionOrder`.
- Failures can mark the schedule as needing review rather than rolling back the SO.

6. Notify dealer users (`ORDER_CONFIRMED`).

3.4 Production Order statuses

Status	Meaning
--------	---------

DRAFT	Rare; normally created as PLANNED
PLANNED	Created at confirm; awaiting start / material readiness
WAITING_FOR_MATERIALS	Cannot proceed until materials available
READY	Ready for floor start
IN_PROGRESS	Floor work active
ON_HOLD	Held
QUALITY_CHECK	In QC emphasis
READY_FOR_PACKAGING	Moving into packaging
READY_FOR_DELIVERY	Ready to leave factory
COMPLETED	Done
CANCELLED	Cancelled

3.5 Starting production on the floor

POST /production-orders/:id/start :

- PO → IN_PROGRESS
- Unlocks prerequisite-free stages (typically opening MATERIAL_PREP)
- Rolls up progress
- Bumps linked SO to IN_PRODUCTION (unless still waiting materials)

3.6 Workflow stages, tasks, and progress

Each published product workflow is a **graph** of stages. On confirm, that graph is snapshotted onto the PO.

Locked chains (factory rules):

- **Opening:** production graphs start at MATERIAL_PREP as root.
- **Terminal:** INSPECTION → PACKAGING → DELIVERY chain is required for finished goods exit.

Stage instance statuses: PENDING → READY → IN_PROGRESS → COMPLETED (also SKIPPED / BLOCKED).

Tasks: Created per executable stage node. Workers assign/start/pause/complete; can report blockers and attach photos. Completing tasks updates stage %, then PO progress, which feeds SO progress shown to dealers.

3.7 WIP kits and semi-finished handoffs

Floor pieces are tracked as **WIP kits** (movable work objects) backed by **inventory lots** (ledger).

Typical handoff:

```
Producing stage completes / posts semi output
→ WIP kit OPEN/READY + SEMI lot in SEMI warehouse
→ Next stage worker receives / claims kit
→ Consumes into next stage
→ Eventually FINISHED_GOOD lots in Finished Goods warehouse
```

WIP kit statuses: OPEN → READY → CLAIMED → CONSUMED (or CANCELLED).

Mobile inventory "Semi-finished" board is **order/kit-centric**, not a flat SKU list: kits grouped by production order and producing stage.

3.8 Finished goods and packages

When packaging/inspection path completes, **Finished Goods (FG)** lots appear for the sales order:

- Quantity and warehouse location
- Package / piece labels (e.g. "Package 1 of 3")
- Days waiting in finished
- Linked delivery and load-check progress (packages checked for loading — **checkmarks prepare load; they do not issue stock**)

Stock issue rule: Only explicit Confirm load / depart posts `DELIVERY_ISSUE` . Dealer receipt confirmation must **not** re-issue FG.

3.9 Scheduling (touchpoints)

After confirm, scheduling allocates capacity against stage estimates, dependencies, working calendar, material readiness, and WIP readiness.

Ops actions (admin mobile/web): approve schedule, recalculate, pin dates, resolve conflicts, at-risk views, capacity optimize, dealer delivery date changes (with policy).

Dealers see **promise / delivery windows**, not internal worker assignments.

3.10 Delivery and dealer receipt

When production is ready and an address exists, a **Delivery** may be created/planned (`PLANNED` → `READY` → `OUT_FOR_DELIVERY` → `DELIVERED`).

Load sheet (mobile): packages listed; workers check packages for the truck; confirm load/depart issues FG.

Dealer **confirm receipt** on the delivery moves the commercial outcome to SO `DELIVERED` and ensures invoice processes as configured.

4. Part C — Mobile screens (what each page shows)

Routes live under `apps/mobile/app/(app)/...` . Feature UI lives under `apps/mobile/src/features/...` .

4.1 Personas and tabs

Persona	Primary tabs
Admin	Home · Orders · Inventory · Production · More
Dealer	Home · Catalog · Orders · Account (+ Schedule, New order)
Employee	Home · Tasks · Completed · Notifications · Profile

4.2 Dealer — Orders

Orders list

Route: `(customer)/(tabs)/orders`

Feature: `OrdersListScreen` (dealer variant)

Shows per card:

- Sales order number
- Title / product summary
- Status badge
- Delivery status

- Product image
- Progress % and current stage label (when in production)
- Required / promised delivery date
- Price / quantity summary (dealer-visible commercial fields)

Does not show: internal costs, worker names, warehouse bin codes (unless exposed deliberately elsewhere).

Order detail

Route: (customer)/orders/[id]

Feature: OrderDetailScreen (dealer)

Shows:

- Hero media
- Status / priority
- Line items and specifications
- Production progress + link into workflow "flow" view
- Schedule / promise card (dealer date change when allowed)
- Delivery address and delivery documents
- **Confirm receipt** when delivery is awaiting customer confirmation

Order production flow map

Route: (customer)/orders/[id]/flow

Shows: Stage graph for the order's production: stage names, status, %, photos on completed stages — **without** admin assignee tooling.

Schedule / calendar

Routes: (customer)/(tabs)/schedule , account calendar

Shows: Calendar of own deliveries / committed windows (DealerDeliveryCard).

Related commercial surfaces

- Quotations list/detail (Accept / reject / revision)
- New order / requests
- Invoices / returns (after delivery)

4.3 Admin — Orders

Orders list

Route: (admin)/(tabs)/orders

Feature: OrdersListScreen (admin)

Shows (richer than dealer):

- SO number, title, status, priority
- Dealer name
- Product image
- Progress %, current stage
- Delivery date
- Linked PO numbers
- Optional cost fields when permissioned
- Day grouping / filters / search (Orders filter sheet: dealer, approval, delivery presets, sort)

Order detail

Route: (admin)/orders/[id]

Shows:

- Hero, status, priority
- Dealer + end-customer context
- Lines / specs
- Costs (if `inventory.cost` / commercial permissions)
- Production progress + workflow hit
- Linked production orders
- Delivery / address
- Invoices, deliveries, returns documents

Order flow map

Route: `(admin)/orders/[id]/flow`

Shows: Full production flow map with assignees, timers, blockers, photos.

4.4 Admin — Production

Production overview

Route: `(admin)/(tabs)/production`

Feature: `ProductionOverviewScreen`

Shows:

- Metric buckets (in production, late, etc.)
- Search + dealer filter
- PO cards: number, product, image, dealer, priority, status, progress, stage label, delivery, late flag

Production detail

Route: `(admin)/production/[id]`

Feature: `ProductionDetailScreen`

Shows:

- Hero + lifecycle strip
- Schedule strip
- Priority / delivery edits (when allowed)
- Task list: stage name, assignee, %, elapsed/estimate, blockers
- Materials usage board
- WIP kits by stage (QR, location, pieces, claimer)
- Hub jumps (workflow, inventory, scheduling)

Production flow

Route: `(admin)/production/[id]/flow`

Stage graph scoped to one PO.

Task detail (admin path)

Route: `(admin)/production/tasks/[id]`

Shares floor task UI with employees (instructions, WIP receive, materials, output).

Workflow authoring (brief)

- `(admin)/production/workflow/*` — stage library and workflow versions
- Product production setup / workflow times under products

These feed **future** snapshots; already-confirmed POs keep their frozen snapshot.

Scheduling

Route: (admin)/scheduling

Shows: Calendar / day board; at-risk, conflicts, awaiting approval; PO cards with promise/risk and material/WIP hints; approve / recal / pin / date actions.

4.5 Admin — Inventory desks tied to orders

Inventory home (signature)

Route: (admin)/(tabs)/inventory

Lifecycle tabs: **Materials** · **Semi-finished** · **Finished**.

- **Materials:** RAW groups, SKU cards, receive/issue/transfer/count
- **Semi-finished:** Kit board by production order (Active / History filters in Filter sheet)
- **Finished:** Outbound desk by sales order (In warehouse / History, warehouse, leave status filters)

Semi order desk

Route: (admin)/inventory/semi/[orderId]

Feature: InventorySemiOrderScreen

Shows: One production order's WIP kits grouped by producing stage; floor status; QR label actions; Active/History filter.

Finished order desk

Route: (admin)/inventory/finished/[salesOrderId]

Feature: InventoryFinishedOrderScreen

Shows:

- Hero (product image, dealer, leave-by urgency)
 - Order facts (SO, POs, days in finished, entered/left, delivery, load progress)
 - **Packages list** — each package/piece with checked vs waiting indicator (load prepare; not stock issue)
 - Warehouse locations / on-hand
 - Actions: view order, view production, view delivery/load, transfer, stock count
-

4.6 Employee — Floor tasks

Worker home

Route: (employee)/(tabs)/index

Feature: WorkerHomeScreen

Current task hero, upcoming list, today progress.

Tasks list / completed

Routes: (employee)/(tabs)/tasks , completed

Feature: TasksListScreen

Industrial cards: stage/department, product, order number, image, priority, deadline, scheduled-today stamp. **No progress % on list cards** (keeps floor focus).

Task detail

Route: (employee)/tasks/[id]

Feature: TaskDetailScreen

Shows / actions:

- Instructions, status, timer, notes, photos
- **Incoming WIP** — receive kits required before start
- **Materials** — usage recording
- **Semi output** — pieces / photos / QR when stage produces semi
- Start gated on WIP receive when required

Delivery load (employee)

Route: (employee)/deliveries/[id]

Load sheet: packages to check; confirm load/depart for stock issue.

4.7 How mobile maps to backend statuses (quick)

Backend	Dealer mobile emphasis	Admin mobile emphasis	Worker mobile emphasis
Quotation SENT	Accept / reject	Quote detail / send history	—
SO DRAFT	“Accepted, preparing”	Confirm if auto-confirm off	—
SO WAITING_FOR_MATERIALS	Waiting materials	Materials / purchasing / inventory	—
SO READY_FOR_PRODUCTION	Queued	Start PO / schedule	Upcoming tasks after start
SO IN_PRODUCTION	Progress % + stage	PO hub + tasks + WIP	Active tasks
SO READY_FOR_DELIVERY	Almost shipping	FG desk + delivery plan	Load sheet
Delivery OUT_FOR_DELIVERY	Track / await	Delivery ops	Driver/load
Delivery/SO delivered	Confirm receipt done	History / invoice	—

5. Part D — End-to-end walkthrough

Story: Dealer needs banquettes

1. Inquiry

Dealer submits RFQ from mobile New Order / portal (or sales enters from WhatsApp). Status **SUBMITTED** .

2. Factory review

Staff moves RFQ **UNDER_REVIEW** → maybe **NEEDS_INFORMATION** → **READY_FOR_QUOTATION** .

3. Quote

Sales creates quotation **DRAFT** → submit **INTERNAL_REVIEW** → manager **Approve** → **Send**. Dealer sees quote as **SENT** . RFQ → **QUOTED** .

4. Accept

Dealer taps **Accept**. Quotation **ACCEPTED** . SO **DRAFT** created. RFQ **CLOSED** .

If auto-confirm on: confirm runs immediately.

5. Confirm (factory release)

One PO per production line (**PLANNED**). Workflow snapshot frozen. Materials reserved.

- Ready → SO **READY_FOR_PRODUCTION**

- Short → SO/PO **WAITING_FOR_MATERIALS** until retry succeeds
Schedule generated for each PO.

6. Where to look on mobile

- Dealer Orders: new SO card
- Admin Orders: SO detail with linked POs
- Admin Scheduling: new allocations

7. Start production

Supervisor starts PO → **IN_PROGRESS** , SO **IN_PRODUCTION** . Opening stage unlocks.

8. Floor work

Worker opens Tasks → Task detail → receive WIP if needed → start → record materials → complete / post semi pieces.

Admin Production detail shows task % and WIP kits.

Inventory Semi desk shows kits for that PO.

9. Terminal path

Inspection → Packaging → Finished lots appear on Finished desk for the SO. Packages listed; leave-by urgency from delivery date.

10. Load and ship

Delivery planned. Load sheet: check packages (prepare only). Confirm load/depart issues FG. Delivery **OUT_FOR_DELIVERY** .

11. Receipt

Dealer confirms receipt on order/delivery UI. SO → **DELIVERED** . Invoice ensure runs. Package checks never substitute for this.

6. Part E — Status cheatsheets

RFQ (**RequestStatus**)

Status	One-liner
DRAFT	Not submitted
SUBMITTED	Waiting factory review
UNDER_REVIEW	Being reviewed
NEEDS_INFORMATION	Dealer must clarify
READY_FOR_QUOTATION	Ready to price
QUOTED	Quote exists / sent
CLOSED	Closed (accepted path)
CANCELLED	Cancelled

Quotation (**QuotationStatus**)

Status	One-liner
DRAFT	Pricing in progress
INTERNAL_REVIEW	Waiting internal approve

APPROVED	Approved to send (not accepted)
SENT	With dealer
VIEWED	Dealer opened (if tracked)
ACCEPTED	Dealer accepted → SO exists
REJECTED	Rejected
REVISION_REQUESTED	Dealer wants changes
EXPIRED / CANCELLED	Terminal commercial

Sales Order (SalesOrderStatus)

Status	One-liner
DRAFT	Accepted; not released
CONFIRMED	Confirmed (enum)
WAITING_FOR_PAYMENT	Payment gate
WAITING_FOR_MATERIALS	Stock not ready
READY_FOR_PRODUCTION	Released; materials OK
IN_PRODUCTION	Floor active
READY_FOR_DELIVERY	Ready to ship
DELIVERED	Dealer received
COMPLETED	Closed out
ON_HOLD / CANCELLED	Hold / cancel

Production Order (ProductionOrderStatus)

Status	One-liner
PLANNED	Created at confirm
WAITING_FOR_MATERIALS	Blocked on stock
READY	Ready to start
IN_PROGRESS	Running
QUALITY_CHECK	QC emphasis
READY_FOR_PACKAGING	Pack path
READY_FOR_DELIVERY	Outbound ready
COMPLETED / ON_HOLD / CANCELLED	End / hold / cancel

Delivery (DeliveryStatus)

Status	One-liner
--------	-----------

PLANNED	Planned
READY	Ready to load
OUT_FOR_DELIVERY	On the road
DELIVERED	Delivered
FAILED / RESCHEDULED / CANCELLED	Exception paths

WIP kit (WipKitStatus)

Status	One-liner
OPEN	Created / collecting pieces
READY	Available for next stage
CLAIMED	Held by consuming task/worker
CONSUMED	Used by next stage
CANCELLED	Voided

7. Glossary

Term	Meaning
RFQ	Request for Quotation — demand intake
Quotation	Priced commercial offer
SO	Sales Order — factory commitment
PO	Production Order — one build unit per SO line
Workflow snapshot	Frozen stage graph for a PO
WIP kit	Physical semi-finished work object on the floor
FG	Finished Goods lot in finished warehouse
Load check	Prepare packages for truck; does not issue stock
Confirm load/depart	Posts delivery issue from FG
Dealer Accept	Only commercial acceptance that creates SO
Internal Approve	Factory send-gate for quotations

Appendix — Key code modules (for engineers)

Area	Path
RFQ API	apps/api/src/modules/requests/
AI intake	apps/api/src/modules/ai-intake/
Quotations	apps/api/src/modules/quotations/

Sales orders	apps/api/src/modules/sales-orders/
Production	apps/api/src/modules/production/
Workflow domain	apps/api/src/modules/production/workflow/
Tasks	apps/api/src/modules/tasks/
Scheduling	apps/api/src/modules/scheduling/
Inventory / FG / WIP	apps/api/src/modules/inventory/, production/wip-kit.*
Deliveries	apps/api/src/modules/deliveries/
Mobile orders	apps/mobile/src/features/sales-orders/
Mobile production	apps/mobile/src/features/production/
Mobile tasks	apps/mobile/src/features/tasks/
Mobile inventory desks	apps/mobile/src/features/inventory/
Schema enums	packages/database/prisma/schema.prisma
